INDEX TO DRILLHOLE AND WELL DATA 1862-1980

INTRODUCTION

This report is a bibliographic index, covering the period 1862 up to the end of 1980, to information concerning drillhole and well data found in the non-confidential mineral exploration assessment reports, publications and open file reports of the Nova Scotia Department of Mines and Energy. The purpose of this index is to provide sources of drillhole and well data, by document title only; the index does not provide the actual drillhole and well data itself. The actual information must be obtained from the document sources cited in the index.

The document titles cited in this index are the titles of all the mineral exploration assessment reports, publications (NSDME acts and regulations, annual reports, bulletins, economic geology series, information series, memoirs, miscellaneous publications, pamphlets, papers, published maps, reports, and reports of activities), and open file reports (unpublished information from various sources on geoscience of Nova Scotia), held by the NSDME that contain data (information) on drillholes and wells, both onshore and offshore. The majority of titles refer to data on diamond drilling reported in assessment reports concerned with mineral exploration on land.

This report is the first index to drillhole and well data published by the Department. At the end of an appropriate time interval, when sufficient additional drillhole and well data has accumulated, a new index to that data will be published covering that specific time interval. If the volume of new drillhole and well data warrants it, annual supplements to this index may be published.

The assessment reports, publications and open file reports cited in this index can be consulted in the libraries of the Halifax and Stellarton offices of the Department. Microfiche copy or hard copy (produced from microfilm) of assessment reports and open file reports can be purchased from Precision Microfilming Services, 6061 Young Street, Halifax, N.S., B3K 2A3 (902 455-5451). Publications can be purchased from the Department libraries. If ordering any documents from this index, please quote the full document number and page numbers (where applicable) e.g. Assessment Report 11D/15A 21-H-67(15); Paper 79-2; Report 80-2; Annual Report 1946, pages 4 to 10; Open File Report (OFR) 410; etc.

INDEX ORGANIZATION

The document titles in this index are primarily organized and ordered according to the Claim Reference map system used by the Nova Scotia Department of Mines and Energy for the purpose of map staking of mineral exploration claims. This Claim Reference map system is based upon the National Topographic System, in which each Claim Reference map is actually one quarter of a 1:50,000 NTS map sheet (Figure 1). For example, NTS map sheet 11D/10 comprises Claim Reference maps 11D/10A, 11D/10B, 11D/10C and 11D/10D, the Claim Reference maps being lettered in a clockwise direction beginning with the southeast corner of the 1:50,000 NTS map sheet.

Documents which geographically fall within an area covered by one Claim Reference map (e.g. 11D/10A), will have their titles listed only once in this index, under that particular Claim Reference map number. Documents which geographically fall within an area covered by two or more Claim Reference maps will have their titles listed under each one of the applicable Claim Reference map numbers. For example, a document describing an exploration drilling program near Windsor (Figure 1) was conducted in an area falling within the boundaries of Claim Reference maps 21A/16D, 21H/01A, 11E/04B and 11D/13C. Consequently, the title of the assessment report containing this drilling data is listed under each one of these particular Claim Reference map numbers. Thus, a document title may be repeated under several different Claim Reference map numbers. Certain types of documents, such as published indexes to Drilling Logs of Government Core Drills and to Water Well Records, contain drilling data that are provincial in their geographic extent. Such documents have not been listed out under every one of the Claim Reference map areas covered by them; however, their titles appear at the beginning of this index under a general "Nova Scotia" map number.

ASSESSMENT REPORT NUMBERS

Each assessment report is uniquely indentified by an assigned report number e.g. 11D/15A 21-H-67(15). The report number is an alpha-numeric code consisting of five components, namely: NSDME Claim Reference map number; commodity type; county; geographic location; and successive report number. Thus-

11D/15A	=	Claim Reference map number
21	=	Commodity type (= Gold)
H	=	County (= Halifax County)
67	=	Geographic location (= Tangier)
(15)	=	Successive report number (= the fifteenth report in the asesment file 11D/15A 21-H-67)

The NSDME Claim Reference map number indicates the part of the province covered by the assessment report. Assessment reports covering more than one Claim Reference map area can show only one (main) Claim Reference map number in their report numbers. However, as explained in the section on INDEX ORGANIZATION, their titles are still listed under the other (subsidiary) Claim reference map numbers. Commodity type represents the primary element, mineral or rock material that forms the target of the exploration activities described in the assessment report (Table 1). County represents one of the eighteen broad, formal, geographic and political areas of Nova Scotia in which the geographic location of the assessment report is found (Table 1). For convenience, unofficial "counties" such as Cape Breton Island, Offshore and Nova Scotia (general) have also been added to this category. Geographic location represents a specific town, village, lake, stream, hill, swamp, etc. that geographically falls within the area covered by the assessment report. Lists of these geographic locations and their corresponding number codes are kept in the Department libraries. The successive report number (01 and onwards) represents an individual, complete report assigned to that particular assessment file, basically numbered chronologically from oldest to most recent report. The number (00), when used, represents a miscellaneous information category.

GEOSCAN

This index was prepared from magnetic tapes generated from the GEOSCAN data base. GEOSCAN (formerly the Canadian Index to Geoscience Data) is the computer-based, national geological data base for Canada, operated by the Canada Centre for Geoscience Data, Geological Survey of Canada in conjunction with participating federal and provincial geoscience agencies, of which the Nova Scotia Department of Mines and Energy is an active participant. Specific search enquiries can be conducted on, and custom indexes can be produced from the GEOSCAN data base, through on-line terminal connections in the Halifax office of the Nova Scotia Department of Mines and Energy.

ACKNOWLEDGEMENTS

We sincerely thank Kay L. Gunn and David S. Reade of the Canada Centre for Geoscience Data, Geological Survey of Canada for their consultations and advice and for conducting the various searches of the GEOSCAN data base that enabled this index to be prepared. We also thank Colin Whittaker of C.M. Whittaker & Associates Ltd. for advice and suggestions regarding text editing. Finally, we express our gratitude to Dr. Jack Garnett, Director, Mineral Resources Division and Dan Murray, Chief Resource Geologist, Resource Geology Section, Nova Scotia Department of Mines and Energy, for their continued support and encouragement throughout this project.

TABLE I

Alpha-numeric Codes for Commodity Types and Counties used in NSDME Assessment Report Numbers

Commodity Types

1	Aluminum	32	Marble
2	Anhydrite	33	Marl
3	Antimony	34	Mica
4	Arsenic	35	Molybdenum
5	Aggregates	36	Moulding Sand
6	Barite	37	Oil Shale
7	Base Metals	38	Peat
8	Beryllium	39	Petroleum
9	Clay	40	Potash
10	Coal	41	Silica
11	Cobalt	42	Salt
12	Columbium	43	Sand and Gravel
13	Copper	44	Sandstone
14	Diatomite	45	Silver
15	Diorite	46	Slag
16	Dolomite	47	Slate
17	Feldspar	48	Strontium
18	Fluorite	49	Talc
19	Fullers Earth	50	Thorium
20	Garnet	51	Tin
21	Gold	52	Titanium
22	Granite	53	Tungsten
23	Graphite	54	Uranium
24	Gypsum	55	Vanadium
25	Iron	56	Vermiculite
27	Lead	57	Zeolites
28	Limestone	58	Zinc
29	Lithium	59	Zirconium
30	Magnesium	60	Sulphur
31	Manganese	62	Bismuth

Counties

A	Annapolis
B	Antigonish
C	Cape Breton
D	Colchester
E	Cumberland
F	Digby
G	Guysborough
H	Halifax
I	Hants
J	Inverness
K	Kings
L	Lunenburg
M	Pictou
N	Queens
O	Richmond
P	Shelburne
Q	Victoria
R	Yarmouth
S	Nova Scotia (general)
W	Offshore
X	Cape Breton
